

ESOC Commercial Truck, Inc.
Environmentally Safe Oil Change

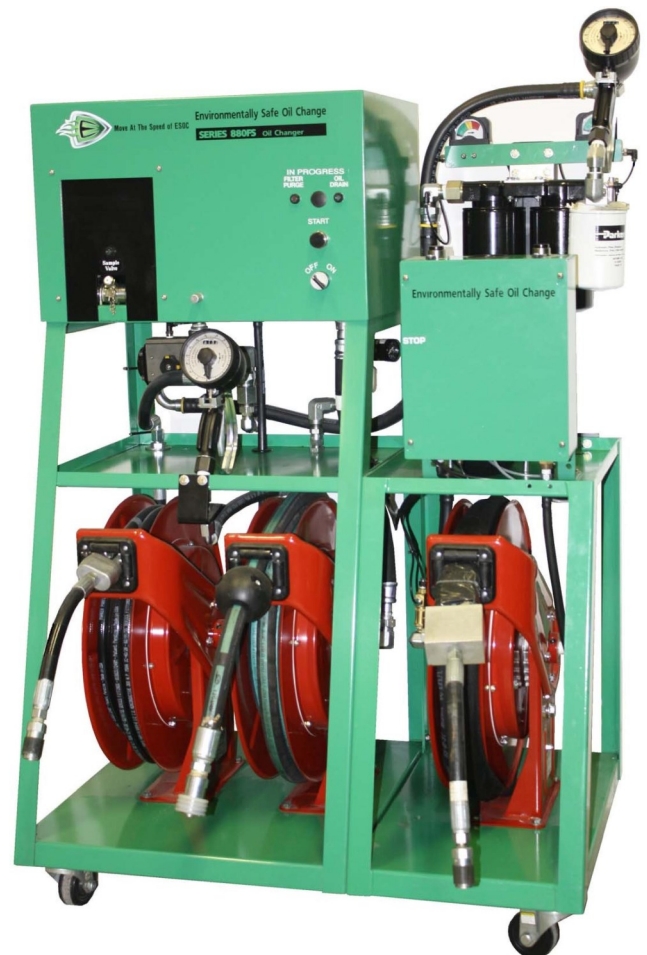

SERIES 880

Filtration & Oil Exchange System

The SERIES 880-FS was designed to filter engine oil in between changes to extend the oil life. Many engines run for up to 60,000 miles on the same oil. Filter your oil every 20,000 miles and you could add between 10,000 and 15,000 more miles between changes.

Simply connect the SERIES 880-FS to the ESOC quick disconnect fittings on the engine and you have two process options:

- Using ESOC's patented oil change process the SERIES 880-FS will purge the waste oil from the oil filters, passages as it removes the waste oil from the sump. It will then refill the engine with fresh metered oil under pressure providing a pre-lube to the system.
- Filter engine oil in a closed loop process. The SERIES 880-FS will purge the filters during the filtration process, so they can be changed if needed with no mess.
